

# Supplier Qualification & Manufacturing Overview

Structured OEM Manufacturing Partner  
for Export-Oriented Oral Care Brands

## Executive Introduction

This document provides an overview of ORALABX's manufacturing structure, operational control systems, compliance framework, and OEM cooperation model for procurement evaluation.

The information presented in this kit is intended to support brand owners, importers, and distributors who are evaluating long-term manufacturing partners for private label oral care products.

ORALABX operates as a structured OEM manufacturing partner focused on export-oriented brands and international distribution markets.

## Company Overview

ORALABX is a private label manufacturing platform focused on export-oriented oral care products including mouthwash, breath spray, and toothpaste.

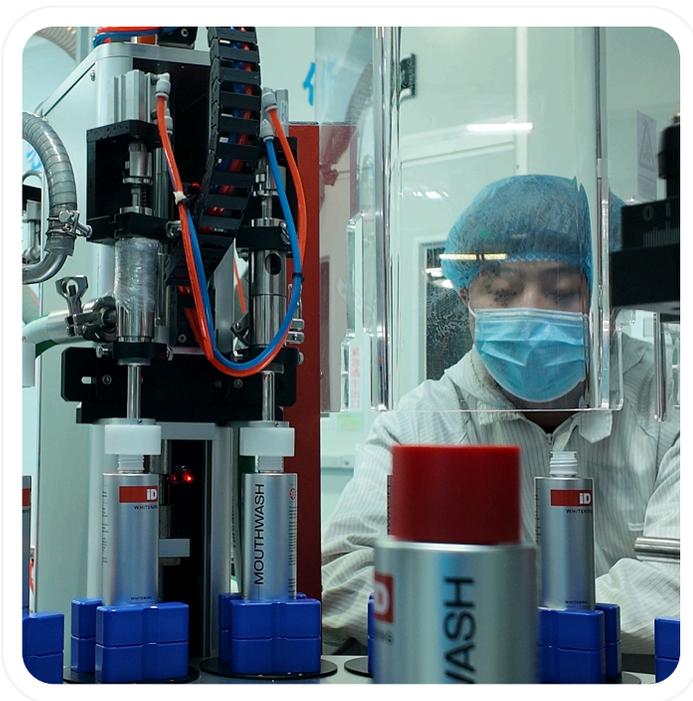

Our manufacturing structure supports international brands that require stable production capacity, documentation compliance, and long-term supply chain cooperation.

We operate exclusively in the private label manufacturing segment and do not compete in the consumer retail market.

## Manufacturing Capability

ORALABX supports scalable OEM production for oral care formulations with structured batch control and export-oriented manufacturing procedures.

Production capability includes:

- Mouthwash filling and mixing systems
- Breath spray assembly and packaging
- Toothpaste formulation and tube filling
- Batch traceability and documentation

Manufacturing processes follow defined internal procedures designed to ensure production consistency and shipment reliability.

## Compliance & Quality Systems

Quality assurance processes are integrated across production, packaging, and documentation control procedures.

Operational quality systems include:

- Microbiological testing protocols
- Batch release authorization
- Label and packaging compliance review
- Stability and compatibility testing

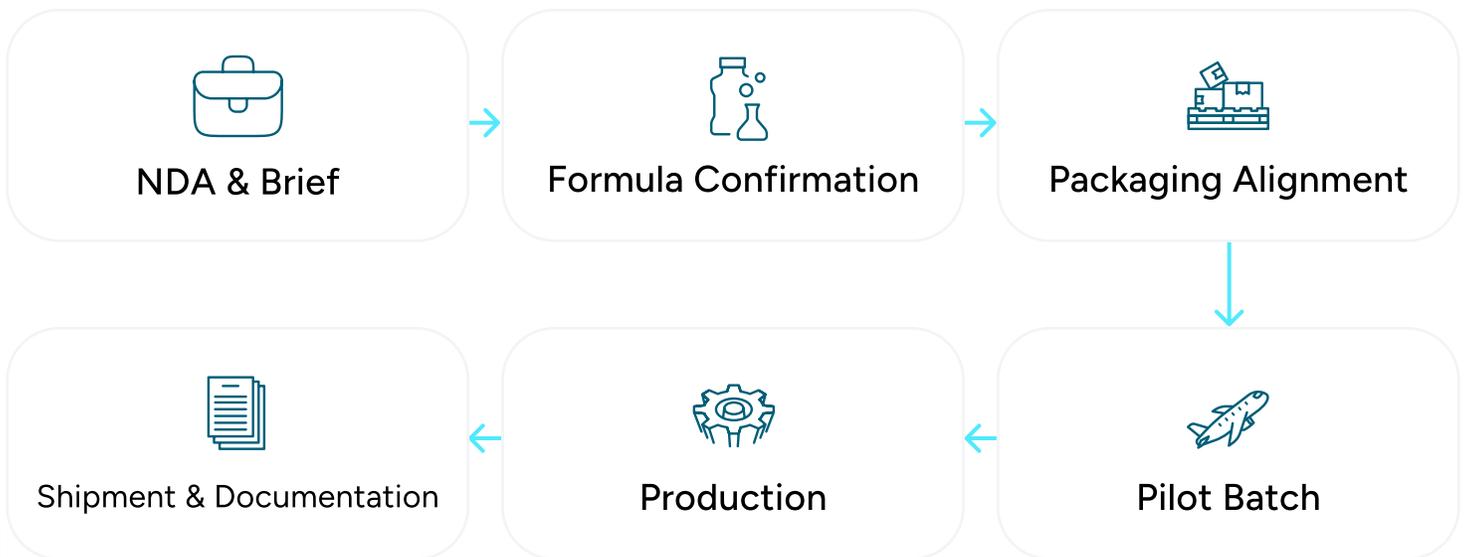

These procedures support export documentation requirements and importer verification processes.

## OEM Project Workflow

Each OEM project follows defined cooperation stages to maintain alignment between the client and the manufacturing team.

Standard workflow stages include:

This structure ensures clear communication and controlled project execution.

## Packaging Solutions

Packaging formats are selected according to brand positioning, distribution channels, and regulatory requirements.

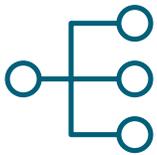

Available packaging options may include:

- Retail bottles
- Bulk packaging
- Institutional packaging
- Custom labeling configurations

Artwork validation and packaging compatibility testing are conducted prior to mass production.

# Why Growing Brands Choose ORALABX

## Supply Chain Reliability

Structured production planning supports stable lead time management and repeat export shipments.

## Formula Protection

Client formulations remain protected within controlled internal production systems.

## Audit Readiness

Documented batch records and export documentation assist importer verification processes.

## Private Label Focus

We operate exclusively as a private label manufacturing partner and do not compete in the consumer market.

## Packaging Solutions

ORALABX supports private label manufacturing across several oral care product categories.

Main categories include:

- Mouthwash
- Breath Spray
- Toothpaste

Each category supports formula customization, packaging configuration, and export documentation alignment.

## Export Documentation Support

Our export support structure includes documentation preparation aligned with international shipment requirements.

Available documentation support may include:

- Product specifications
- Ingredient declarations
- Batch records
- Certificate documentation (when required)
- Export shipping documentation

These documents assist importers during regulatory review and customs clearance processes.

## Start Your OEM Project Discussion

ORALABX supports structured private label manufacturing for export-oriented oral care brands.
